Randy/Lou:

I would like to reiterate that we have not changed our stance and very much object to the VMRC #14-0343 and the James River Water Authority seeking authorization to install a submerged water line beneath the Rivanna River and a raw water intake along the north bank of the James river. I would also like to reiterate that the Proposed location is NOT in the town of Columbia, but in a completely separate district call Fork Union. The new location on Dr William Hammonds Property is still the Point of Fork. This is a very historic site along the James river which should not be desecrated because of our local governments inability to put the proposed pumping station in the town of Columbia like it was originally proposed in 2013. We plan to fight this proposed location to the full extent of the law and hope that the Marine Resources Commission recognizes the fact that this pumping station would be a complete disaster to not only the James river, but also the entire landmass that makes up the confluence of the James river and Rivanna river. We beg you to please consider the potential destruction to the precarious land mass between both rivers and that blasting holes in a Cambrian Schist rock that makes up the Point could cause irreparable damage. There are better locations that have not been considered by the JRWA because of their typical government mentality and not listening to its citizens who have proposed more feasible locations.

Thank you
